EXPLANATION ON ISSUER'S JOURNEY

A. The Journey in Four Stages

Stage	Explanation
STAGE 1 — Sign-up	The user accepts everything by checkbox: Terms of Use, PDPA consent (separate tick, before eKYC), T&C, Risk Statement (+ risk acknowledgement form), Warning Statement, Issuer Agreement. Then: Shoraka's AML/CDD check → account approved → ONLY THEN is the onboarding fee paid (the fee comes AFTER approval, so a rejected applicant never pays and no refund is ever needed). The account becomes fully active on payment.
STAGE 2 — Applying for financing	The issuer completes the Disclosure Statement form (including its credit exposure and the concurrent-P2P declaration, RM Guidelines para 14.29), confirms each invoice with the Receivable Verification Declaration (para 14.23), provides guarantor details (with the guarantors' own consents), and uploads supporting documents (audited financial statements where the amount sought exceeds RM500,000).
STAGE 3 — Offer, acceptance & signing (3 steps)	Step 1: Shoraka issues the Letter of Offer + Guarantee Acknowledgment (as a pair, nothing else bundled in). Step 2: the issuer has 7 DAYS to accept — and acceptance only counts if the executed Board Resolution (prescribed template) is uploaded with it; no resolution, no acceptance; if day 7 passes, the offer lapses. Shoraka then approves the resolution. Step 3: only after that approval, the execution pack unlocks — Facility Agreement + JSG + Deed of Assignment, all fully signed within 14 DAYS. Then notice to the paymaster, acknowledged in writing. Only then can money move.
STAGE 4 — Each note / each invoice	Five short documents in a fixed order (Utilisation Request → Letter of Agency → Purchase Requisition → Sale Contract → Investment Note), risk score generated and published to investors, note goes live. Money is released only if: the offer period has closed, at least 80% of the target was raised (RM Guidelines para 14.27), and no material adverse change has occurred (para 14.10); nothing above the initial target may be retained (para 14.28). If under 80%: investors are refunded from the trust account within the window fixed in the T&C. All funds raised and all repayments flow through the trust account structures required by paras 14.09 and 14.14 — never through the Platform Operator's own operating account.

B. Document by Document

No.	Document	Stage in Issuer Journey	When it appears	What the issuer does on screen	What the system must enforce (blocking rules)	What the system must record / do in the background
1	**Terms of Use**	**STAGE 1 — Sign-up**	The moment anyone lands on the website/app, and again at sign-up	Reads and ticks a checkbox at sign-up	The system must not allow an account to be created without the tick	Save which version was accepted, date/time, and IP address
2	**PDPA Notice & Consent (personal data consent)**	**STAGE 1 — Sign-up**	At sign-up, BEFORE the eKYC step starts	Ticks a SEPARATE checkbox just for this (not merged with the other checkboxes)	eKYC must not start until this box is ticked. This box must be its own tick — the system must not allow one 'accept all' tick to cover it (Personal Data Protection Act 2010 requirement)	Save version, date/time, IP. Keep this consent record permanently retrievable
3	**T&C (Terms & Conditions)**	**STAGE 1 — Sign-up**	At sign-up, same screen or step as items 4–6	Reads and ticks	The user cannot proceed past sign-up until ticked. IMPORTANT: any amendment to the T&C must NOT go live automatically. The T&C form part of the platform rules, and the RM Guidelines require proposed rules or amendments to be submitted to the SC before taking effect (SC Guidelines on Recognized Markets, paras 7.02–7.03). Build a 'draft vs published' version control with a publication switch operated only on the Platform Operator's confirmation of SC clearance	Save version number + a hash of the document, date/time, IP. On any new published version, prompt existing users to re-accept
4	**Risk Statement**	**STAGE 1 — Sign-up**	At sign-up, with the T&C	Reads and ticks. Must also complete a short 'I understand the risks' self-declaration form (not just a tick — a form the user actively fills/confirms, as required by RM Guidelines para 6.01(d))	The user cannot proceed without both the tick and the completed risk form. The wording must include a statement that losses are not covered by the Capital Market Compensation Fund (RM	Store the completed risk form against the user profile; it must be exportable for SC inspection

No.	Document	Stage in Issuer Journey	When it appears	What the issuer does on screen	What the system must enforce (blocking rules)	What the system must record / do in the background
					Guidelines para 6.01(e)) — displayed on screen, not hidden in a link	
5	**Warning Statement**	**STAGE 1 — Sign-up (and repeated)**	At sign-up AND every time the issuer starts a new financing application	Reads it (displayed on screen, full text, not collapsed); ticks acknowledgement at sign-up	The statement must be permanently visible on the platform (e.g. footer/offer pages), not a one-time popup, consistent with the disclosure obligations under the RM Guidelines	Log each display/acknowledgement
6	**Issuer Agreement**	**STAGE 1 — Sign-up**	At sign-up, with the T&C	Reads and ticks	AGREED SEQUENCE: the onboarding fee is charged ONLY AFTER Shoraka's compliance function approves the AML/CDD check. Build: ticks complete → 'pending AML review' status → approved → payment request issued → fee paid → account ACTIVE. If the AML check fails, the account is rejected with no payment ever taken — no refund handling is needed. No payment screen may be shown before approval	Save version, date/time, IP. Log the AML decision date and decision-maker. Fee invoice generated only on approval; account activation timestamped on payment
7	**Disclosure Statement**	**STAGE 2 — Application**	When the issuer applies for financing	Fills in a structured form: business details, purpose of financing, amount sought, business plan, existing borrowings/financing and credit exposure, and a YES/NO question: 'Are you raising funds for this same purpose on any other P2P platform?' (content per RM Guidelines para 14.29)	The application cannot be submitted if the concurrent-platform question is YES (hard block — concurrent hosting for the same purpose is prohibited under RM Guidelines para 14.21) or unanswered. If the amount sought exceeds RM500,000, the system must require an AUDITED financial statement upload — unaudited is	Timestamp the submission. This information will be shown to investors, and must remain updatable throughout the life of the note (continuing disclosure, RM Guidelines para 14.31(a))

No.	Document	Stage in Issuer Journey	When it appears	What the issuer does on screen	What the system must enforce (blocking rules)	What the system must record / do in the background
					not acceptable above that threshold	
8	**Receivable Verification Declaration (per invoice)**	**STAGE 2 — Application (and STAGE 4, per invoice)**	Every time the issuer submits an invoice for financing	Ticks four confirmations for that specific invoice: (1) the invoice is payable to and owned by the issuer, (2) it represents a genuine payment obligation, (3) it has not been financed or disposed of elsewhere, (4) it is not charged/pledged to anyone (RM Guidelines para 14.23)	The invoice cannot go to the marketplace until all four are confirmed AND Shoraka's back-office marks the invoice as 'verified' following its own checks (searches, paymaster confirmation). Provide an admin verify/reject function	Store the declaration per invoice. One declaration per invoice — not one covering all
9	**Letter of Offer + Guarantee Acknowledgment**	**STAGE 3 — Offer (Step 1 of 3)**	Issued together by Shoraka after the facility is approved	Views the LO on screen. The guarantor(s) receive the Guarantee Acknowledgment at the same time — each guarantor gets an individual link to acknowledge	START A 7-DAY CLOCK from the date the LO is issued. The LO and Guarantee Acknowledgment are issued together as a pair — no other document is to be bundled into this step	Generate the LO from the approved template with the approved terms. Log issue date/time — this timestamp drives the 7-day and 14-day clocks below. Notify the issuer and each guarantor
10	**LO Acceptance + executed Board Resolution (prescribed template)**	**STAGE 3 — Acceptance (Step 2 of 3)**	Within 7 DAYS of the LO being issued	Downloads the prescribed Board Resolution template, procures execution by the directors, uploads the executed copy (PDF), and clicks 'Accept Offer'. Both must happen together — acceptance is not valid without the executed Board Resolution	HARD RULE: the 'Accept Offer' button only works if the executed Board Resolution is uploaded with it. If day 7 passes without acceptance + resolution, the LO EXPIRES automatically — accept button disabled, facility status becomes 'lapsed' (Shoraka may reissue at its discretion). Shoraka's authorised personnel then review the uploaded resolution via an approve/reject function. On rejection, the issuer re-uploads within the window set by Shoraka	Store the executed resolution against the facility. Log: acceptance date/time, resolution upload date/time, Shoraka's approval date and approver. Send reminders to the issuer at day 3 and day 6 of the 7-day window

No.	Document	Stage in Issuer Journey	When it appears	What the issuer does on screen	What the system must enforce (blocking rules)	What the system must record / do in the background
11	**Facility Agreement + JSG + Deed of Assignment (execution pack)**	**STAGE 3 — Execution (Step 3 of 3)**	Only unlocked AFTER Shoraka approves the Board Resolution; all signing completed within 14 DAYS	Signs the Facility Agreement and Deed of Assignment on SigningCloud (digital certificate). Each guarantor signs the JSG in their own name via their own signing link — a director cannot sign on a guarantor's behalf	START A 14-DAY CLOCK from Shoraka's approval of the Board Resolution. This step stays LOCKED until that approval. All documents must be fully signed by all signatories within the 14 days — failing which, the facility moves to 'execution lapsed' status and signing links are disabled (extension at Shoraka's discretion). No disbursement until all documents are fully signed	Store the signed PDFs with SigningCloud certificates — these are the legal originals, no deletion permitted. Track signature status per document per signatory. Reminders at day 7 and day 12
12	**Notice of Assignment to the paymaster**	**STAGE 3 — Perfection (after execution)**	Immediately after the execution pack is fully signed, BEFORE any money moves	Nothing — this is a Shoraka/platform-side step, but it must be built into the workflow	HARD BLOCK: funds cannot be released to the issuer until the paymaster has acknowledged the notice in writing (perfection of the statutory assignment under s.4(3) Civil Law Act 1956). Build the step: notice sent → acknowledgement uploaded/confirmed → disbursement unlocked	Store the notice and the paymaster's acknowledgement per contract (and per invoice on the invoice-only track — a new invoice may require a fresh notice)
13	**Per-note documents: Utilisation Request → Letter of Agency → Purchase Requisition → Sale Contract → Investment Note**	**STAGE 4 — Per note / per invoice**	Every time a note is created for an invoice	Confirms/executes each document in the platform, IN THIS EXACT ORDER	ORDER IS NOT OPTIONAL — this is a Shariah requirement (the commodity purchase must precede the sale). The system must force the sequence. The Sale Contract's profit rate must be validated: reject anything above 18% per annum (RM Guidelines para 14.05(h)). The note cannot list until the platform's risk score for it is generated, and that score must be shown to investors on the	Timestamp every step to the second and retain the timestamps — the Shariah Committee/Shariah auditor will verify that purchase preceded sale. Keep the commodity trade evidence attached to the note

No.	Document	Stage in Issuer Journey	When it appears	What the issuer does on screen	What the system must enforce (blocking rules)	What the system must record / do in the background
					offer page (RM Guidelines paras 14.24–14.26)	

C. Rules

1. Sequence is law: LO + Guarantee Acknowledgment first → acceptance with executed Board Resolution within 7 days → Shoraka's approval of the resolution → execution pack (Facility Agreement + JSG + Deed of Assignment) within 14 days → paymaster acknowledgement → only then disbursement. And in the per-note documents, purchase BEFORE sale. All of these are to be built as hard blocks with automatic lapse on missed deadlines, not as warnings.
2. Every acceptance and signature needs an audit trail: document version, hash, date/time to the second, IP address, and the identity of the person who clicked. The system should be built on the assumption that the SC or a court will call for these records.
3. All investor monies and all repayments sit in the trust accounts required by the RM Guidelines (paras 14.09, 14.14 and 14.15) — never in the Platform Operator's own operating account. The disbursement and repayment modules must point at the trust accounts only.
4. No amendment to the T&C, the platform rules, or the legal templates goes live automatically. The RM Guidelines require rules and rule amendments to be submitted to the SC before taking effect (paras 7.02–7.03). Build a version-control gate: amendments remain in 'draft' until the Platform Operator confirms SC clearance and authorises publication.
